

Excel tasks

Provide general and customized versions of Excel to realize batch and fast import of tasks

Material error correction

Scan the material information to determine whether the material matches the current processing task.

Process ticket

To facilitate process management, process work orders are automatically printed during processing. The print template is optional and can be customized.

Production report

Production tasks can be traced back, providing daily, monthly, and annual reports

Configurable coding templates

Quick and simple code changes, such as language, font and size. Robust and legible marking, have excellent adhesion to the surface.

Printing Device

Various printing configuration for different applications, enabling you to maintain high speed cable production

Feed Sensor + Changeable Inlet Diameter

Auto-stop function when wire is used out. Different inlet diameter for different size wires.

4 Metal Rollers with Belts Feeding

Strong feeding force + no scratch mark guarantee.
