

EW-3105

Wire Cutting&StrippingMachine(70 mm² cable with rotarycutter)

Features

Wire stripping machine is mainly used for processing new energy cables, cable wires, coaxial wires, communication wires, multi-core wires and shielded wires. Realizing the functions of automatic wire cutting, rotating stripping and multi-layer stripping. Industrial control network connection MS system EPA management.

1. It can process coils of wire by setting its total length, head stripping and rear stripping as required, which greatly improves working efficiency.
2. Automatic wire cutting, stripping on two ends, and multi-layers stripping at one time;
3. Industrial level control chip and high precise servo driver, which ensure high speed and stable running for long lifetime;
4. Motion controller, touching screen operation, up to 100 stripping archives can be stored;
5. Automatic wire diameter adjustment, there is no need to change cutting tools for different cables;
6. The cable of outer diameter under 18 mm can be easily processed, the strong driving force ensures the high working efficiency;
7. The machine is multi-functional, there have been reserved some communication ports for connecting auxiliary devices ;
8. Auxiliary devices: automatic wire feeder, wire collecting device, mechanical arms, wire winding unit and so on.

Technical data

Model	EW-3105
Wire range	4-70mm ²
Stripping Length	Wire head 0.1-200mm, wire end 0.1-100mm
Cutting length	0.1-100000mm
Drive	Belt conveyor , 8 wheels independently servo driven
Stripping type	Rotary and stripping cutter
Tool materials	Imported high speed steel and import tungsten steel
Stripping speed	450-650pcs/h
Dimension	1100*615*1270mm
Power	AC220V/110V 50/60HZ
Motor	0.75KW
Air pressure	0.4-0.6 Mpa
