

EW-1030

Crawler Wire Brushing Machine

Features

The shielding net can be brushed smoothly to facilitate later processing; The wire rod is slowly put into the front section by holding the wire rod, and the hand-held wire rod is rotated slowly; When brushing the shielding net, it should be slowly brushed back from the front end (the principle of combing hair is the same). The wire can be pulled back and forth to increase friction, that is to brush the knot. Different sizes of wire can adjust the spacing between the track brush wheels.

Technical data

Model	EW-1030
Wire brushing range	2.5-70mm ²
Combing length	150mm
Speed	3s/pcs (Adjustable)
Weight	42Kgs
Dimension	530*320*290mm
Power supply	220V/110V/50HZ/60HZ
Plug	Euro/US/Chinese plug
